## Start of Block: robots

Q104 Please start by watching this short video showing some recently created robots that look very human-like. Imagine what these technologies will be like in 10 years -- it seems very likely that soon we won't be able to tell who is a human and who is a robot.

---

roNu

Please imagine a hospital that starts using cutting-edge humanoid robots as nurses.

These robots would be completely indistinguishable from humans in every way -- this is not possible quite yet, but it will be in the near future. Not only will they look and move exactly like humans, but they will even be able to pass as human when you have long conversations with them.

Everything that human nurses can do at work, these robots will be able to do as well. Hospitals that use these robots will likely be required to inform patients that their nurses are robots, since otherwise people would not be able to tell.

Imagine that these robot nurses are used to provide physical and emotional care for patients. Below is a picture of what these robots might look like.

Please answer the following questions about this kind of robot, keeping in mind that you wouldn't be able to tell it apart from a human if the hospital didn't tell you.

☐ (1)

---

roMa

Please imagine a hospital that starts using cutting-edge humanoid robots to maintain and fix medical machines.

These robots would be completely indistinguishable from humans in every way -- this is not possible quite yet, but it will be in the near future. Not only will they look and move exactly like humans, but they will even be able to pass as human when you have long conversations with them.

Everything that human workers can do at work, these robots will be able to do as well. Hospitals that use these robots will likely be required to inform patients that their workers are robots, since otherwise people would not be able to tell.

Imagine that these robots are used to fix complex medical machines, like the ones used to take X-rays or MRIs. Below is a picture of what these robots might look like.

Please answer the following questions about this kind of robot, keeping in mind that you wouldn't be able to tell it apart from a human if the hospital didn't tell you.
