Start of Block: robot

Q104 Please start by watching this short video showing some recently created robots that look very human-like. Imagine what these technologies will be like in 10 years -- it seems very likely that soon we won't be able to tell who is a human and who is a robot.

Page Break

bot

Please read carefully:

Picture a health and wellness store that sells vitamins, herbal supplements, and products for yoga and meditation.

Now imagine that this store started using futuristic humanoid robots as employees.

These robots would be completely indistinguishable from humans in every way -- this is not possible quite yet, but it will be in the near future. Not only will they look and move exactly like humans, but they will even be able to pass as human when you have long conversations with them.

Stores that use these robots will likely be required to inform patients that their employees are robots, since otherwise people would not be able to tell. Below is a picture of what these robots might look like.

Please answer the following questions about this kind of robot, keeping in mind that you wouldn't be able to tell it apart from a human if the store didn't tell you.

☐ (1)

Now imagine that this store started using futuristic humanoid robots as employees.

These robots would be completely indistinguishable from humans in every way -- this is not possible quite yet, but it will be in the near future. Not only will they look and move exactly like humans, but they will even be able to pass as human when you have long conversations with them.

Stores that use these robots will likely be required to inform patients that their employees are robots, since otherwise people would not be able to tell. Below is a picture of what these robots might look like.

Using robots like this would offer many benefits to customers. For example, the robots would have a perfect, instant memory of all the store's products and all published health-related research, and would be able to offer very accurate, up-to-date advice about how each product can best be used to optimize customers' health. The robots would also be able to learn about customers over time and provide advice that is personalized to each customer's specific history and preferences.

Please answer the following questions about this kind of robot, keeping in mind that you wouldn't be able to tell it apart from a human if the store didn't tell you.
